EXPERIENCE

Light & Wonder

Associate Software Engineer

09/2025 – Present

Bengaluru, India

- Developed GUI for device flash management, featuring reusable UI components, WebSocket communication and support for component installation, log management and system configuration, reducing memory footprint by 40% and improving GUI rendering performance by 60%.
- Resolved critical bugs in ArgOS through systematic debugging, log analysis and leveraged an AI-powered workflow integrating GitHub Copilot with JIRA, logs, codebase context to perform root-cause analysis and generate targeted fixes, reducing average bug resolution time by 70%.

Tech Stack: React.js, C++, Redux, Event-Driven Architecture, RabbitMQ, Docker, REST API, Websockets

Light & Wonder

Software Engineer Intern

03/2025 – 09/2025

Bengaluru, India

- Resolved critical build warnings, production Bugs in the ArgOS codebase through extensive debugging, log analysis resulting in a 60% improvement in overall system stability and response handling.
- Architected 15+ automated test scenarios covering game cycles, event validations, and meter flows, enhancing test coverage and early defect detection by 40%.

Tech Stack: React, Redux, TypeScript, C++, CI/CD, OS, Debugging, WebSockets

Amazon

Amazon ML Summer School - Apprenticeship

09/2023 – 10/2023

- Mastered foundational Machine Learning concepts and algorithms through a rigorous 6-week intensive sessions, applying practical AI models to solve complex real-world scenarios

Tech Stack: ML, Deep Learning, Deep Neural Networks, Reinforcement Learning, GenAI, NLP, AI

TECHNICAL SKILLS

Programming Languages: C++, Java, Python, C, SQL, JavaScript

Frameworks & Database: React.js, Next.js, Node.js, Express.js, Spring Boot, MySQL, MongoDB

Tools/Technologies: Git, Perforce, CI/CD, Docker, Kubernetes, Linux, Ubuntu, GithubActions, Redux

Core CS Fundamentals: OOPS, DSA, OS, Computer Networks, DBMS, NLP, ML, Distributed Systems

PROJECTS

Evo-Health | [GitHub](#)

- Engineered a Early Metabolic Syndrome prediction platform using Genetically Optimized Bayesian Networks with optimal feature selection, achieving 90% prediction accuracy, provided personalized healthcare recommendations
- Developed and Integrated an AI chat assistant that provided real-time health context, enhancing users engagement and reducing average response time by 40% while managing over 500 user inquiries daily.
- Containerized the application with Docker, reducing image size, and deployed it on Minikube-based Kubernetes

Tech Stack: React, Node.js, Express.js, Spring Boot, MongoDB, JWT, REST APIs, LLMs, Gemini API, Axios, Python, Bayesian Networks, Docker, Kubernetes (K8s), GithubActions

EDUCATION

Amrita Vishwa Vidyapeetham, Coimbatore

B.Tech - Computer Science and Engineering - CGPA - 8.18/10

09/2021 – 05/2025

Coimbatore, Tamil Nadu

PUBLICATIONS

- "A Hybrid Feature Selection Model for Early Prediction of Metabolic Syndrome" - Indexed in IEEE and SCOPUS.
- "Early Prediction and Personalized Healthcare Assistant for Metabolic Syndrome" - Indexed in IEEE and SCOPUS.
